Well Control Events & Trends

- **Blowouts happens globally onshore and offshore.**
- Responding to more pressure control jobs in conjunction with Well workovers and P&A operations.
- Relief well/Intervention well planning & projects are increasing globally for non-emergency work.(P&A).
- Serious well control incidents are escalating due to operator are handling issues themselves and same could lead to serious harm or fatality to personnel on site.

What do we see ?

Some Operators, handling well control incidents themselves?

- Safety Plan ?
- Personnel on location ?
- Hot zone ?
- Blowouts can ignite ?

Well Control Incidents, Why is it happening ?

Leading factor are Human Errors.

- Not following set program, standards & guidelines.
- Competence
- Well Control training

How can we improve in the Industry ?
